

Replace Wood Pallets for Exporting Plastic Resins
Goal - 1 Ton resin bags that are inexpensive, stackable and shippable on plastic channels

AmeriGlobe's MegaBase® Bag meets these goals

Stable:

The wider base design creates the needed stability for stacking. As you can see below, the bag uses the entire pallet surface to support the product. This provides stacking security to allow two high stacking in warehouses.

MegaBase® Bag

Shippable on Plastic Channels:

We tested this bag with our new Ex-Pallet. This is a separate pallet that is made of fabric and plastic channels.

Ex-Pallet

Stackable:

The MegaBase® bag is stable on both the wood pallet and the Ex-Pallet. This allows you to choose either at the time of filling or any time after.

Ex-Pallet with MegaBase® Bag

Easy Handling:

This new system makes retrieving the top bag very easy since forklift entry points remain clear at all times. The sleeve portion of the Ex-Pallet keep the bags from migrating into the channel.

Open, Protected Entry

The concept is simple. Fill the MegaBase® bag on your standard filling equipment, then place the bag on the pallet of your choice. Switch later if you change your mind.

There is no need for all wood pallets or all Ex-Pallets. This bag works on both!
