

Lowering Costs Through Unique Solutions

AMERIGLOBE Seed Count Bulk Bag

The move to selling soy bean seeds by seed count makes sense but it does create a few issues. AmeriGlobe has the solutions. Since there is no way to know which size seeds will need to be packaged before the bags are purchased, many packagers will be forced to either stock four bag sizes or gamble on which size they will need. AmeriGlobe's solution only requires two specifications. Our unique design allows for our two specification to handle the wide range of seed sizes without having to sacrifice stability or safety. Given the weak economy, not having to tie up your cash to stock four specifications make sense.

Low seed count bags may cost you warehouse space. Instead of stacking 2,000lb or 2,500lb bags three high, now a stack would only hold 3,900lb. That is a obviously a costly loss of space. With AmeriGlobe's bags, that same stack would hold 5,200lbs, a 33% improvement. Without stabilizing features this would not be possible.

- Only Two Specs Needed, Not Four
- Reduced Warehouse Costs
- Improved Safety
- U.S. Back-up
- Increased Stability
- Reduced Handling Labor
- Designed for Treated and Untreated Seed
- A Delivery Guarantee

Don't fall behind the competition, call AmeriGlobe today to experience our solution to the issues caused by selling by seed count. Whether you are worried about stocking too many specifications or losing warehouse space, call us at (866) 264-5623 to see our Seed Count Bags for yourself.
