HAZARDOUS WASTE REMEDIATION BAG

AmeriGlobe's Hazardous Waste Remediation Bag is a cost-effective, user-friendly way to handle waste. This bag has a duffle top for easy filling and a flat bottom for stability. Its one-cubic yard capacity is three times larger than a 55-gallon drum, costing approximately \$35 each. By using these bags you will also have a reduction in accidents and injuries.

Because the bag is collapsible, 100 empty bags can be stored on a pallet, saving valuable warehouse space and reducing shipping costs. With a forklift, you can move one metric ton at a time. This design is U.N.-approved for Packaging Groups II and III. AmeriGlobe can also add a 3 mil LLDPE liner for wet materials.

Contact your AmeriGlobe representative for a better way to handle hazardous waste and save \$80 to \$100 per ton on packaging costs.
